REPORT ON THE WORKING OF THE SCHEME DURING 1952-53.

5

The Scheme of antimosquito measures proposed by the Director of Public Health and approved by the Government in G.O.Ms. No.248, P.H., dated 20th January 1950 was carried out by the Municipality during 1952-53.

Four mazdoors and one maistry were employed for the anti-mosquito spraying campaign, for a period of nearly eight months as the operations were carried out during the non-monsoon months only. Larvicidal spraying was organised throughout the week and the 12 Wards were divided into 12 spraying blocks two blocks being attended to each day by four mazdoors under the supervision of two Maistries (One maistry was deputed from Sanitary Ward). There were 4 sprayers in use and they were in a working order. Gammaxene P 520 was used as a larvicide.

Cesspools and other stagnations were systematically sprayed. Besides oil booms (waste cotton immersed in malariol) were placed in drains and other places where there was a continuous flow of sullage water so as to prevent breeding of mosquitoes. One of the two Sanitary Inspectors who has undergone malaria training was in charge of the operations. The Municipal Health Officer also was supervising the measures personally by paying periodical visits to breeding places and issuing necessaryinstructions for the prompt undertaking of remedial measures wherever they were found necessary.

Antimosquito spraying operations yielded good results by abating mosquito nuisance considerably.
